Concrete colors shown approximate the color of broom-finished colored concrete flatwork made with a medium-gray cement and cured with LITHOCHROME® Colorwax™ or COLORCURE® Concrete Sealer in the matching color. Concrete not so cured will have less brilliance. Concrete should be batched and placed in accordance with Tech-Data Bulletin A-304.

Please note: concrete colors shown are approximate. Due to shade variations associated with individual color monitors and printers, we suggest utilization of our literature request form to review an actual CHROMIX® Admixtures Color Chart. We strongly recommend that a test slab be poured and approved prior to starting the job. Test slabs should be poured replicating jobsite conditions.
